Dummy PDF for Scraping Practice

This is a dummy PDF generated to help you practice PDF scraping with Python.

The file contains headings, paragraphs, a small numbered list, and a fake link.

Use libraries like PyPDF2, pdfplumber, or PyMuPDF to extract the contents.

Sample Steps:

1. Download the PDF file.
2. Try extracting text from each page.
3. Try locating headings (e.g., 'Sample Steps').
4. Try extracting any links or patterns.
